

The Fertilizers I Use:

INORGANIC FERTILIZERS

Calcium Nitrate 1gram per litre Use on its own

Campells 'A' or 'B' ½ gram per litre

Peters (10-13-17) ½ gram per litre

Peters (20-9-17) ½ gram per litre

ORGANIC FERTILIZERS

Nitrosol 1ml. per litre

Seasol 1ml. per litre

Molasses 1ml. per litre

Premix molasses at one cup per four litres of water and then use as above.

You will notice that I do not mix them excessively as I fertilize at least every second watering. I like to feed them continuously, rather than a big amount infrequently.

I like to rotate them, as most fertilizers have varying amounts of ingredients so the plants get a good balanced supply.

Use SEASOL every two weeks in the winter to combat the cold temperatures.

I do mix the organic fertilizers together, but not the inorganic, except at change over from summer to winter, (March and September)
